

Tables / Lists / Background Image

30 pts.

In order to insert an image in the background, look at the code for this page to see how it was written and where it was placed.

A simple list:

Presidents:

- George
- Thomas
- Abe

A simple table:

Name:	Washington	Lincoln	Roosevelt
War:	Revolution	Civil War	WWII

A table with no borders makes a nice navigation bar:(Just add links!)

[Hilton](#)

[Marriott](#)

[Westin](#)

[Sheraton](#)

Or a very simple bottom navigation bar would be to write a series of links in a row and center them.

[Hilton](#) [Marriott](#) [Westin](#) [Sheraton](#)

Finally, a table is a nice way to line up images:

A table is a nice way to line up images: Hide the Border = 0!

If you prefer not to Wrap Text around an image, then just use a table!

Screenshot

Additional Changes

Congratulations, once your website looks like the Model Web Page shown above, you have succeeded. Now, I want to teach you a few commands that will help you succeed on your next project: "Review: Table, Lists and Background Image."

- A.** Look at a line of code that has a `<th> </th>`. I want you to change the "th" to "td". Then Save and Refresh. What change did you observe? Write it down and tell me when I step up to grade this project. (5pts.)

B. Now, look at a line of code that has a `<td> </td>`. I want you to change the "td" to "th". Then Save and Refresh. What change did you observe? Write it down and tell me when I step up to grade this project. (5pts.)

C. Find the line of code that says:

```
<strong>A simple table:</strong>
```

```
<p align="left">
```

Change "left" to "center". Then Save and Refresh. What change did you observe? Write it down and tell me when I step up to grade this project. (5pts.)

D. Type the following lines of code near the "A Simple List" section of code. *You will notice that I am mixing Lists and Tables! In a few moments when you begin the "Review" page, you will see that I am going to have you place a list in a table. This code that I am giving you is your Answer to making it!!*

```
<table border="1" style="width:25%">
<tr>
<td>Letters
<ul>
<li>A</li>
<li>B</li>
<li>C</li>
</ul>
</td>
</tr>
</table>
```

Then Save and Refresh. What change did you observe. Write it down and tell me when I step up to grade this project. (5pts.)
